

How to use stereotaxic tools

Stereotaxic arm① is valued for its positioning precision. However, when it comes to positioning the fiber-optic cannula, some of the precision is lost when attaching or detaching the cannula to/from the arm. To simplify the implantation of the cannula and maintain the precision, we have developed a stereotaxic cannula holder② and fiber-optic cannula adapters③ for attaching our M3 cannulas to the stereotaxic arm.
